*** IMPORTANT! PLEASE READ ME! ***

Thank you for your purchase of Pocket Writer 3! Please take note of the following last-minute additions to the Pocket Writer 3 User's Guide:

If you have a file copy utility, you can cut down on "disk juggling" by copying Writer 3's overlay files to another disk, such as a document disk. When looking for overlays, Writer 3 will search the current document drive first; then the boot drive, if these are different.

The Undo feature can be used to retrieve deleted sentence ranges (defined by <CTRL> r <CTRL> r), but not block ranges (<CTRL> r <CTRL> b).

The box draw feature (<CTRL> o) will not draw past the left or right margins of your text. Also be careful of things like wordwrap, justification, and indentation, as these can scramble a box's appearance. For the best results, use a right margin wider than your box, turn indentation, justification, and centering off, and reserve a separate paragraph for each line of the box. An easy way to accomplish this is to press <RETURN> a number of times to mark out a space where the box will go. Then move the cursor back into the blank lines you've formed and draw the box.

When printing a document containing box characters, the box character set must be switched on (use <CTRL> T). Otherwise, the box characters will appear and print as foreign characters.

Because Writer 3/64 is so much larger than its ancestors, the printer files have been moved to the reverse side of the disk. We have left room on the program disk for one additional printer file. To install the printer file of your choice there, use the following procedure:

First, insert your Writer 3 disk with the label side up, and load the program. Turn the disk over and press <C=> d to get a list of the available printer files. Move the cursor over the name of the printer file you want, using the cursor keys; then press <RETURN> to load the file. Flip the disk over again and press <C=> s, then <RETURN> twice to save the file on the program side. You may want to edit the "configure" file to preset the printer file name (see p. 54 of the Writer 2 Reference Guide.)

To protect your program disk against accidental damage, please place a write-protect sticker over each disk notch once you have configured the disk.
